Education

Expected May 2028

Northeastern University Candidate for B.S Computer Science, Minor in Mathematics, Concentration in Artificial Intelligence

Relevant Courses: Computer Systems, Artificial Intelligence, Machine Learning

Major GPA: 3.5/4.0

Skills

Languages	Python, SQL, Java, HTML, JS, CSS, TypeScript	Frameworks	REST APIs, React, Next.js, Prisma
Software	Docker, VS Code, Cloudflare, Git/Github	Databases	SQLite, Supabase

Experience

Community Support | Gankster.gg

October 2024 - Present

- Resolved 600+ user support tickets for a platform serving over 150,000 users, maintaining high response efficiency and user satisfaction.
- Collaborated with developers to streamline workflow and improve overall user experience.
- Strengthened communication skills by translating technical issues into clear, actionable reports.

Co-Founder | ClinicScreen (Next.js, TypeScript, Raspberry Pi)

March 2026 - Present

- Designed and built ClinicScreen, a multi-tenant digital-signage platform geared towards allowing doctors to have more control over ad placement, informational tools, and more for patients in Illinois, Iowa, and California.
- Built a drag-and-drop video timeline editor, a Claude API scraper that imports doctor bios, and Raspberry Pi kiosks with encrypted Bluetooth Wi-Fi setup using QuickAuth for all user authentication.

Founder | Games Club @ Northeastern University (Oakland)

September 2024 – April 2025

- Initiated student organization focused on community-building via video and board games.
- Recruited members via campus fairs and outreach, eventually creating a mailing list of 50+ students.

Projects

VSN Analysis | HTML, CSS, JavaScript, Python | vsnanalysis.com

August 2025 - Present

- Built a full-stack stock analysis platform enabling users to search for equities and indices using real-time financial data using yfinance API.
- Implemented user authentication and a community feature to promote engagement and shared insights.
- Designed and deployed backend infrastructure using Supabase for data storage and account management.
- Improved accessibility to less familiar investors by creating a simpler and more straightforward user interface using HTML, CSS, and JavaScript.
- Currently implementing an LLM-assisted equity analysis engine that combines deterministic financial scoring with structured AI-generated research summaries, risk factors, and bull/bear thesis extraction.

QuickAuth | Next.js, TypeScript, Prisma, SQLite

August 2026 - Present

- Built a self-hosted authentication service from scratch, replacing hosted providers like Auth0/Clerk, with signup, login, protected routes, and user profiles.
- Secured credentials with Argon2id password hashing and hashed, database-backed sessions delivered only via HTTP-only cookies.
- Designed a Prisma relational schema (User, Profile, Session) supporting server-side session validation, expiry, revocation, and account disabling.
